## Now you can meet your safety obligations without breaking the bank with Fenplay Softfall

**5-YEAR GUARANTEE**

**5-YEAR GUARANTEE**

### CONSIDER THE ADVANTAGES:

- ❖ Low cost safer surfacing system.
- ❖ Tested by the Rubber and Plastics Research Association in accordance with **BSEN 1177:1998** criteria
- ❖ Environmentally friendly with tough hardwearing synthetic sand filled surface, green in colour akin to natural grass (coloured elements can be included at additional cost)
- ❖ Chemically un-reactive and biologically inert. Lightweight shock pads.
- ❖ In most situations an engineered sub-base is not required unlike tiles or wetpour
- ❖ Minimum installation disturbance, minimum excavations, minimum waste disposal, minimum maintenance and all year round installation.
- ❖ Modules to suit all critical fall height situations
- ❖ Continuous Surface not hollow section like some matting products
- ❖ User friendly, Kids love it!

Tested Critical Fall Heights		
Product	Concrete Sub-base	Soil Sub-base
FP.10	Up to 600mm	Up to 600mm
FP.17	0.8m	1.7m
FP.35	1.7m	2.5m
FP.52	2.5m	3.00m +

## Fenplay Softfall Maintenance Schedule

Match-winner™ a sophisticated needle punched carpet, specifically developed and manufactured as a surfacing material for outdoor sport and children's play. The material is designed to be filled with a special sand, to hold the sand firmly in place; the 100% polypropylene pile has vertical, horizontal and angular fibres. These fibres known by the acronym VHAF trap stabilise the sand infill to provide maximum durability with minimum maintenance requirements.

Whether used on its own or as a wearing surface for our Fenplay Softfall impact attenuating systems, Match-winner™ provides an attractive and long lasting alternative to other surfacing systems but, to keep the surface in peak condition, some minor maintenance may be required from time to time. Below is the schedule which, if followed, will ensure that your Match-winner™ surface last as long as intended under normal levels of activity.

The surfaces should be checked as part of a normal routine. It may be convenient to do this when carrying out safety checks on equipment but in any case surfaces should be checked regularly for signs of damage, accidental or other wise.

### 1 - Cleaning

The surfaces should be clear of debris, such as drink cans, bottles, etc., which could cause injuries on any type of surface.

The surface will also benefit from light brushing using a hand held brush. This will help to re-distribute the surface sand and also remove smaller pieces of debris, e.g. Cigarette ends, leaves, stones, etc.

If heavy surface contamination is present contact our office for more detailed advice on removal and permissible cleaning agents / methods.

### 2 - Maintenance

If the surface is to maintain its resistance to vandalism and premature wear, it is important to ensure that the sand within the Match-winner carpet is maintained to within 2mm of the surface of the pile.

Generally, the surface should only require treatment with sand at yearly intervals (dependent on intensity of the use). The sand of a special rounded, non-staining type which can be obtained from ourselves.

If required we can apply the sand for you or if you wish to do the work yourself we can just supply the sand. Builders sand or similar sands should not be used because of their abrasive nature, which could damage the carpet pile.

The sand is best applied using a fairly soft brush to agitate the carpet fibres, so allowing the sand to fill the areas where it is required.

Once the sand has been applied, it is best to give the whole surface a light brushing to distribute the sand evenly over the whole area.

### 3 - Weed Growth

Should wind-blown seeds contaminate the surface or should there be weeds ingress from the perimeters treatments can be carried out with a glyphosate-based herbicide such as Roundup or Tumbleweed. Alternatively we can arrange for this work to be undertaken on your behalf by a specialist contractor.

### 4 - Damage

Should the surface become damaged in any place please contact us as soon as possible with details, as minor damage is very soon made worse by inquisitive hands if not put rightly quickly.

Should a fire have been lit on the surface, and then this would not normally burn through the carpet (the carpet is protected by the sand contained within it), although scorching can occur. Whilst this may deface the surface, it should not affect the performance. If however you require this to be corrected, please contact our office for advice or assistance.
